Personal Statment

My name is Moch. Naufal Ardian Ramadhan, also known as Nopal, is a student at Politeknik Negeri Malang studying Information Technology. I actively participate in the Informatics Research Workshop organization, where I gain knowledge about UI/UX Design and Public Speaking. I'm also interested in trying new things, like coding and creating content. This helps me learn more about technology.

Experience

Data Management

Telkom Indonesia · Intern Juli 2022 - November 2022

During my internship at Telkom Indonesia, I was in charge of managing data from start to finish. The process includes checking the validity of incoming data, storing data so that it is neat and safe, processing data into information that is easier to understand, and dealing with problematic or inconsistent data. I do all this so that the team can work with correct and precise data to make the right decisions. I'm not just good with the technical stuff; I also work with other teams to make sure data management goes smoothly and on time.

UI/UX Designer

Dapanel Media Indonesia · Full-time Mei 2023 - Agustus 2023

I work at PT Dapanel Media Indonesia as a UI/UX Designer. The company helps other businesses by offering website consulting and digital marketing services. I learned a lot about how to create designs that look good and work well. I learned how to do user research, make wireframes, and develop user-friendly UI. I also learned a lot about digital marketing, which taught me about user behavior and effective digital strategies.
